## Abstracts

The global Gap Type ESD Suppressor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The gap type ESD suppressor has the characteristics of high-speed response, low crosstalk noise, high reliability, and non-polarity. They are usually used to protect various electronic equipment and circuits and have a wide range of applications.

The gap type ESD suppressor is a device used to protect electronic equipment from electrostatic discharge damage. It usually consists of an air gap between two metal electrodes. When the electrostatic voltage exceeds the preset breakdown voltage of the device, a discharge occurs in the air gap, releasing the charge to the ground, thus protecting the device from damage.
