Abstracts

The global Garage Door Spring market size is expected to reach \$ 9159 million by 2032, rising at a market growth of 5.7% CAGR during the forecast period (2026-2032).

In 2025, global sales of garage door springs reached 325 million units, with an average selling price of \$18.60 per unit. Total global production capacity stood at approximately 405 million units per year, and the industry's average gross profit margin was around 26%. Garage door springs are critical mechanical components within garage door balancing systems; they primarily utilize elastic potential energy to counterbalance the weight of the door, ensuring smooth opening, closing, and long-term operation. Based on their structure, these products are categorized into two main types?torsion springs and extension springs?with torsion springs serving as the mainstream choice due to their superior longevity and stability. These springs are widely used in residential garage doors, commercial rolling shutters, industrial sectional doors, and warehouse logistics door systems, effectively reducing motor load and enhancing overall operational safety.

Upstream operations involve suppliers of raw materials such as high-carbon spring steel wire, alloy steel, anti-corrosion coating materials, bearing assemblies, and fasteners, while downstream markets include garage door manufacturers, door control system integrators, construction companies, and the maintenance and replacement sector. Market demand continues to grow steadily, driven by residential construction and renovation in North America, the widespread adoption of smart garage doors, and the ongoing expansion of warehousing and logistics facilities. Future product development will focus on high cycle life, corrosion resistance, low noise levels, and smart monitoring capabilities, while demand for the refurbishment and replacement of older doors, alongside upgrades to smart door control systems, will continue to generate new market opportunities.

This report studies the global Garage Door Spring production, demand, key manufacturers, and key regions.
