## Abstracts

The global Garden Pesticides market size is expected to reach \$ 1023 million by 2032, rising at a market growth of 2.1% CAGR during the forecast period (2026-2032).

Pesticides are substances meant for attracting, seducing, and then destroying any pest. They are a class of biocide. The most common use of pesticides is as plant protection products (also known as crop protection products), which in general protect plants from damaging influences such as weeds, fungi, or insects. This use of pesticides is so common that the term pesticide is often treated as synonymous with plant protection product, although it is in fact a broader term, as pesticides are also used for non-agricultural purposes.

Garden Pesticides are substances meant for attracting, seducing, and then destroying any pest in the garden, which in general protect plants from damaging influences such as weeds, fungi, or insects. Garden pesticides include herbicides (which kill plants), insecticides (which kill insects), fungicides (which kill fungi) and other pesticides.

Global Garden Pesticides key players include Scotts, Syngenta AG, Bayer AG, DowDuPont, Andersons, etc. Global top five manufacturers hold a share over 35%.

China is the largest market, with a share about 25%, followed by Europe, and Japan, both have a share about 40 percent.

In terms of product, Herbicide is the largest segment, with a share about 50%. And in terms of application, the largest application is Public gardens, followed by Private gardens.
