Abstracts

The global Gas Bag Autosampler market size is expected to reach \$ 247 million by 2032, rising at a market growth of 8.4% CAGR during the forecast period (2026-2032).

In 2025, the global production of Gas Bag Sampler reached 3,543 units, with a global average price of US\$38,500 per unit. The gross profit margin of major companies in the industry was approximately 35%-55%. Gas Bag Sampler is an automated sample introduction device used at the front end of gas sample analysis. It stably delivers air, exhaust gas, VOCs, odorous gases, or process gases from a sampling gas bag into a gas chromatograph, gas chromatography-mass spectrometer, or pre-concentration system according to a set flow rate and injection program. This device typically consists of a gas bag interface, switching valve, quantitative loop, tubing purging, flow/pressure control, and software control system, which can reduce human error and improve injection repeatability and detection efficiency.
