The global Gas Cremation Furnace market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

A gas cremation furnace, also known as a retort, is a specialized piece of equipment used in the process of cremating human remains. It is designed to efficiently and respectfully reduce the body to cremated remains, often referred to as “ashes,” through high-temperature combustion.

The gas cremation furnace typically operates by using natural gas or propane as a fuel source to generate the intense heat required for the cremation process. The furnace chamber is designed to reach temperatures ranging from 1,400 to 1,800 degrees Fahrenheit (760 to 980 degrees Celsius) to effectively break down the remains.
