## Abstracts

The global Gas Cutting Torches market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A gas cutting torch is a tool used in metal cutting processes, such as oxy-fuel cutting or gas cutting. The gas cutting torch operates by igniting the mixed oxygen and fuel gas at the cutting tip. The resulting high-temperature flame rapidly heats the metal being cut, causing it to melt. At the same time, the force of the oxygen stream blows away the molten metal, creating a cut or kerf in the workpiece. The key components of a gas cutting torch including: handle, mixer ( responsible for combining the oxygen and the fuel gas), cutting tip, oxygen valve, and fuel gas valve.

Gas cutting torches are used for cutting a wide range of ferrous and non-ferrous materials, including steel, stainless steel, aluminum, and more. They are especially useful when working with thick materials that are difficult to cut using other methods. They are widely used in metal fabrication, construction, shipbuilding, and various industrial applications.
