Abstracts

The global Gas Dehorner market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

'Gas dehorner' refers to a tool that uses gas to dehorn. Dehorning refers to the removal of the horns of livestock such as cattle through different methods such as cauterization or cutting. Gas dehorners use gas flames to accomplish this task. It is designed for use with a gas or liquefied petroleum gas flame when dehorning cattle. This method may involve applying high temperatures to the horns to destroy the growth points to encourage loss of the horns or prevent further growth.
