Abstracts

The global Gas Dehydration Membrane market size is expected to reach \$ 140.6 million by 2030, rising at a market growth of 6.1% CAGR during the forecast period (2024-2030).

Gas dehydration membranes are used to remove water vapor from gas streams, a crucial process in various industrial applications such as natural gas processing, petrochemical production, and air compression. These membranes work by selectively allowing water vapor to permeate through them while retaining the gas molecules, effectively drying the gas stream. Gas dehydration membranes are categorized based on the material composition and the specific technology or mechanism they employ for dehydration.
