According to our (Global Info Research) latest study, the global Gas Energy Efficiency Audit Service market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Gas energy efficiency audit service refers to the activities of energy-consuming units themselves or entrusting institutions engaged in energy audit to detect, verify, analyze and evaluate the physical and financial processes of gas use in accordance with relevant national energy-saving laws and standards. This process is designed to help energy-consuming units understand their own gas usage, discover energy waste and energy-saving potential, and thus formulate and implement energy-saving measures to improve energy utilization efficiency and economic benefits.

The main purpose of the gas energy efficiency audit service is that through energy audit, energy-consuming units can timely discover and solve energy waste problems, reduce energy costs, and improve economic benefits. At the same time, energy conservation and consumption reduction can also help reduce pollutant emissions, improve environmental quality, and improve social benefits. Energy audit can promote energy-consuming units to establish and improve energy management systems, standardize energy management processes, improve energy management levels, and transform energy-saving management into standardized and scientific ones. Energy audit can accurately reflect the energy measurement statistics of energy-consuming units, provide data support for energy-consuming units to develop energy management systems suitable for their own enterprises, reduce manual management workload, and reduce management costs.

The current status and dynamics of the gas energy efficiency audit service market can be summarized from the following aspects:

With the continuous improvement of global and Chinese requirements for energy efficiency and environmental protection, the demand for gas energy efficiency audit services continues to grow. In particular, in the fields of industrial, commercial and residential gas use, the increasing attention to the rationality and efficiency of energy use has promoted the development of the gas energy efficiency audit service market.

Policy support: The government has introduced a series of policies on energy conservation, emission reduction and energy efficiency improvement, such as the "coal to gas" policy and the implementation plan for the renewal and transformation of aging urban gas pipelines. These policies not only promote the development of the gas industry, but also provide a broad space for the development of the gas energy efficiency audit service market. The application of new technologies such as the Internet of Things, big data, and artificial intelligence in the gas industry continues to deepen, making gas energy efficiency audit services more accurate and efficient. Through smart sensors, data analysis and other means, gas usage can be monitored and evaluated in real time, providing users with more scientific energy efficiency improvement suggestions.

In summary, the gas energy efficiency audit service market is in a rapid development stage, and market demand continues to grow. In the future, the market will continue to maintain a rapid development trend.
