Abstracts

The gas fire extinguishing control system is a device specially used in automatic gas fire extinguishing systems. It integrates automatic detection, automatic alarm and automatic fire extinguishing functions. This kind of controller can be connected to smoke and temperature fire detectors, emergency start and stop buttons, manual automatic transfer switches, gas spray indicators, audible and visual alarms and other equipment, and provides an interface to drive the solenoid valve to start the gas Fire extinguishing equipment. Gas fire extinguishing systems usually use gases such as carbon dioxide, heptafluoropropane or IG541 as fire extinguishing agents to extinguish fires by reducing the oxygen concentration in the protected area or absorbing heat. These systems consist of fire extinguishing agent bottle groups, driving gas bottle groups, one-way valves, selector valves, driving devices, headers, connecting pipes, nozzles, signal feedback devices, safety relief devices, control panels, leak detection devices, and pipe fittings. And hook bracket, etc. They are suitable for electrical fires, solid surface fires, liquid fires and gas fires where the gas source can be cut off.

According to our (Global Info Research) latest study, the global Gas Fire Extinguishing Control System market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
