The global Gas Heat Only Boilers market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Gas heat-only boilers are heating systems that use natural gas or propane to produce hot water for heating purposes. Unlike combination boilers (combi boilers) that provide both hot water for domestic use and space heating, heat-only boilers are designed exclusively for space heating. They are commonly used in residential and commercial buildings where a separate system is used for heating water for domestic purposes.
