Gas-Insulated AC Switchgear refers to a type of high-voltage switchgear where the electrical components are enclosed in a sealed environment filled with insulating gas, typically sulfur hexafluoride (SF₆). This design minimizes the size of the switchgear and enhances electrical performance by preventing arcing between the components. It is widely used in power distribution systems, offering compactness and reliability. The gas insulation ensures effective isolation and protection of electrical circuits, making it suitable for various applications, including substations and power grids. Gas-insulated AC switchgear is favored for its efficiency, space-saving design, and superior performance in high-voltage applications.
