The global Gas Insulated Enclosed Switchgear market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Gas insulated enclosed switchgear (GIS) is a type of power distribution equipment used in power transmission and distribution systems. It is a compact metal enclosed switchgear using SF₆ (sulfur hexafluoride) gas as the insulation and arc extinguishing medium. The design purpose of GIS is to include the high-voltage components of the power distribution system in a sealed enclosure, thereby minimizing the risk of electric shock, fire, and explosion. The housing is made of metal, typically aluminum or stainless steel, and filled with high-pressure SF₆ gas to provide insulation and arc extinguishing properties.

This report studies the global Gas Insulated Enclosed Switchgear production, demand, key manufacturers, and key regions.
