Abstracts

According to our (Global Info Research) latest study, the global Gas Insulated OLTC market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Gas-insulated OLTC, the full name of which is gas-insulated on-load tap changer, is a special electrical equipment switch that allows the tap changer of the transformer to be adjusted while the transformer is running (i.e. with load), thereby changing the output voltage of the transformer. This switch is designed to finely adjust the voltage without affecting the continuous power supply of the power system. Unlike the no-load tap changer (NLTC), OLTC allows voltage adjustment when the transformer is running with load without interrupting the power supply. Through precise voltage control, the stability and efficiency of the power system can be improved and the impact of voltage fluctuations on equipment can be reduced. Using gas (such as SF₆) as the insulating medium has excellent insulation performance and arc extinguishing ability, ensuring the safe operation of equipment under high voltage and high current conditions.

Gas-insulated OLTC (on-load tap changer) plays an important role in power systems, especially in applications where power interruption during tap change is unacceptable. With the upgrading and intelligent development of power systems, the demand for gas-insulated OLTC will continue to grow. In addition, with the development of new energy sources such as solar energy and wind energy, the application of gas-insulated OLTC in the field of new energy has gradually increased. These new energy fields have put forward higher requirements for the high efficiency and low energy consumption of equipment, which has promoted the continuous innovation and progress of gas-insulated OLTC technology.
