According to our (Global Info Research) latest study, the global Gas Jet Compressors market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Gas jet compressor is a jet pump that uses high-pressure steam, air, or gas motive to entrain lower-pressure steam, air, or gas suction and compress the mixture to a pressure higher than the suction pressure. The mixed gases then enter a venturi tail where they continue to mix, and then emerge from the tail at a pressure intermediate to those of the motive and suction fluids. Gas jet compressors are also sometimes referred to as Thermocompressors if the motive and suction phases are both steam.
