Abstracts

The global Gas Jet Compressors market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Gas jet compressor is a jet pump that uses high-pressure steam, air, or gas motive to entrain lower-pressure steam, air, or gas suction and compress the mixture to a pressure higher than the suction pressure. The mixed gases then enter a venturi tail where they continue to mix, and then emerge from the tail at a pressure intermediate to those of the motive and suction fluids. Gas jet compressors are also sometimes referred to as Thermocompressors if the motive and suction phases are both steam.
