The global Gas Lift Compressor market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Gas lift compression is a process used to increase the pressure of natural gas in order to produce more from existing wells. A gas lift compressor injects gas in to an oil well to aerate the crude oil, increasing production. The gas is introduced from the surface into the tubing-casing annulus and introduced into the tubing at the desired depth.
