## Abstracts

Trough disc gas-liquid distributor usually consists of a shunt tank (also known as the main tank or primary tank) and a distribution tank (also known as a secondary tank). The liquid is initially divided into several streams through the opening at the bottom of the first stage tank, which are respectively added to the liquid distribution tank below. The bottom (or wall) of the distribution groove is provided with holes (or conduits) to evenly distribute the liquid on the packing layer.
