The global Gas and Damp Proof Membranes for Buildings market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Gas and Damp Proof Membranes are special materials used in buildings to prevent water, moisture and air penetration. This material is typically made from materials such as polyethylene, polyvinyl chloride, or ethylene-propylene rubber, which are highly durable, strong, and chemically resistant. The main function of Gas and Damp Proof Membranes is to prevent moisture, humidity and harmful gases from penetrating into the building from the ground. In addition, Gas and Damp Proof Membranes can also prevent radioactive gases, methane and other harmful gases from penetrating into the interior of the building to ensure the safety and health of indoor air.

Gas and Damp Proof Membranes are widely used in various construction projects, such as residential, commercial, industrial, public facilities, etc.
