The global Gas Operations Management System market size is expected to reach \$ 2874 million by 2032, rising at a market growth of 8.1% CAGR during the forecast period (2026-2032).

Gas Operations Management System refers to a specialized software platform and integrated solution designed for gas utilities, gas distribution companies and pipeline operators to manage production operations, network dispatching, field operations, emergency response and operational decision-making. The system typically integrates SCADA, GIS-based gas network data, IoT device connectivity, station automation, video linkage, mobile inspection, work order dispatching, leak alarms, demand forecasting, hydraulic simulation, supply-demand balancing and operational analytics. It enables centralized monitoring, remote control, abnormal-event warning, dispatch coordination and closed-loop management across city gate stations, pressure regulating stations, valve chambers, LNG/CNG facilities, industrial and commercial users, gas pipelines, metering points and emergency field crews. This study focuses on professional software, SaaS platforms, industry-specific application modules and related implementation services used for gas safety operations, network control, asset operation, risk response and operational analytics.
