Abstracts

The global Gas Pressure Dampers market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A gas pressure damper is a type of spring that, unlike a typical mechanical spring that relies on elastic deformation, uses compressed gas contained within an enclosed cylinder sealed by a sliding piston to pneumatically store potential energy and withstand external force applied parallel to the direction of the piston shaft. Common applications include automobiles (where they are incorporated into the design of struts that support the weight of the hatchback tailgate while they are open) and office chairs. They are also used in furniture, medical and aerospace applications. Much larger gas springs are found in machines that are used in industrial manufacturing (the press tooling industry), where the forces they are required to exert often range from 2500N to 400,000N (forty tonnes).

This report studies the global Gas Pressure Dampers production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Gas Pressure Dampers, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
