Abstracts

The global Gas Shutoff Valve market size is expected to reach \$ 851 million by 2032, rising at a market growth of 5.9% CAGR during the forecast period (2026-2032).

In 2025, the global production of Gas Shutoff Valves reached approximately 18.4 million units, with a price of approximately USD 29.70 per unit. Gas Shutoff Valves are valves specifically designed to shut off and control gas flow in gas piping systems. They are mainly used for natural gas, liquefied petroleum gas, city gas, industrial gases, and other gaseous media. These valves typically consist of a metal valve body, stem, disc or sealing components, and manual or automatic actuators. By closing the valve, gas flow can be completely interrupted, while certain designs also provide limited flow regulation capabilities. Compared with general-purpose globe valves, Gas Shutoff Valves place greater emphasis on gas tightness, pressure resistance, corrosion resistance, and long-term reliability due to the leakage and, in some applications, flammability risks associated with gaseous media. These products are widely used in natural gas transmission and distribution systems, gas networks, LPG systems, industrial gas equipment, boilers, gas-fired power generation equipment, chemical plants, and commercial gas facilities.

The global Gas Shutoff Valve market is experiencing steady growth, mainly driven by natural gas infrastructure development, urban gas network upgrades, industrial gas applications, and replacement demand for gas equipment. As the use of natural gas, LPG, and other industrial gases continues to expand, gas piping systems are placing greater emphasis on valve sealing performance, safety, and rapid shut-off capabilities. In particular, gas leakage can create significant safety risks in chemical, energy, and urban gas applications, making gas tightness, pressure resistance, and long-term reliability important technical requirements. Going forward, Gas Shutoff Valves are

expected to develop toward higher sealing ratings, faster shut-off, higher pressure resistance, improved corrosion resistance, and intelligent control, with increasing integration into gas-leak detection, remote-control, and automatic safety shut-off systems.
