## Abstracts

The global Gas Spring market size is expected to reach \$ 3301 million by 2032, rising at a market growth of 4.2% CAGR during the forecast period (2026-2032).

A gas spring is a type of spring that, unlike a typical mechanical spring that relies on elastic deformation, uses compressed gas contained within an enclosed cylinder sealed by a sliding piston to pneumatically store potential energy and withstand external force applied parallel to the direction of the piston shaft. Common applications include automobiles (where they are incorporated into the design of struts that support the weight of the hatchback tailgate while they are open) and office chairs. They are also used in furniture, medical and aerospace applications. Much larger gas springs are found in machines that are used in industrial manufacturing (the press tooling industry), where the forces they are required to exert often range from 2500N to 400,000N (forty tonnes).

Global Gas Spring key players include Stabilus, Suspa, Lant, Bansbach, WDF, etc. Global top five manufacturers hold a share about 40%. Europe is the largest market, with a share about 45%, followed by United States and China, both with a share about 20 percent. In terms of product, Lockable Gas Spring is the largest segment, with a share about 20%. And in terms of application, the largest application is Automotive, followed by Furniture, Industrial, Aerospace and Medical.

This report studies the global Gas Spring production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Gas Spring and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering
