According to our (Global Info Research) latest study, the global Gas Static Bearing market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

A gas static bearing is a type of bearing that uses gas as a lubricant to create a static pressure film between the shaft and the bearing surfaces. Unlike dynamic pressure bearings, gas static bearings do not rely on shaft motion to generate the lubricant film; instead, they inject gas from an external source into the bearing gap, forming a stable gas film to support the load. These bearings are commonly used in applications requiring high precision and stability, such as aerospace, precision machinery, and high-speed equipment, offering extremely low friction, wear, and noise.
