The global Gas Traction Spring market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Gas traction spring also known as tension and pulling force gas spring, standard traction gas spring works in the opposite direction of other gas springs. Stainless steel traction gas spring takes high pressure inert gas as motive power and its pulling force is basically constant during the whole working stroke. It can automatically return after being pulled out by outside motive power, is free from fatigue phenomenon, noise and maintenance under the long-term pulling state, has the advantages of convenient installation, energy conservation and environment protection.
