According to our (Global Info Research) latest study, the global Gas Turbine and Steam Turbine and Compressors market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A gas turbine, also known as a combustion turbine, is a type of internal combustion engine used for power generation and propulsion. It operates on the principle of converting the energy of high-pressure and high-temperature gases into mechanical work through the rotation of a turbine.

A steam turbine is a mechanical device that converts the thermal energy of steam into mechanical work by using the principles of thermodynamics and rotary motion. It is commonly used for power generation in steam power plants.

Compressors are mechanical devices used to increase the pressure of a gas by reducing its volume. They play a crucial role in various applications, including refrigeration, air conditioning, gas processing, and power generation.

In the China market, the core manufacturers of Gas Turbine and Steam Turbine and Compressors (GSTC) are mainly companies such as GE, Oriental Electronics, and Siemens.
