## Abstracts

The global Gas Turbine and Steam Turbine and Compressors market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

In the China market, the core manufacturers of Gas Turbine and Steam Turbine and Compressors (GSTC) are mainly companies such as GE, Oriental Electronics, and Siemens. The top four players in this industry account for about 80% of the market share. The product can be classified into gas turbine, steam turbine and compressor based on the type of product. It is widely used in power generation, steel mills and other industries.

A gas turbine, also known as a combustion turbine, is a type of internal combustion engine used for power generation and propulsion. It operates on the principle of converting the energy of high-pressure and high-temperature gases into mechanical work through the rotation of a turbine.

A steam turbine is a mechanical device that converts the thermal energy of steam into mechanical work by using the principles of thermodynamics and rotary motion. It is commonly used for power generation in steam power plants.

Compressors are mechanical devices used to increase the pressure of a gas by reducing its volume. They play a crucial role in various applications, including refrigeration, air conditioning, gas processing, and power generation.
