According to our (Global Info Research) latest study, the global Gas Wall Furnace market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Wall hanging furnace is the abbreviation of gas wall hanging furnace, the full name is 'gas wall hanging mining furnace', is a small terminal heating equipment with natural gas, artificial gas or liquefied gas as fuel for household heating. Compared with central heating, which uses coal as the main fuel, wall hanging furnace mainly uses cleaner and more efficient natural gas, and emits far less solid and gas pollutants than central heating mode. It is a kind of water heater that uses natural gas as energy, with a variety of safety protection measures such as anti-freezing protection, anti-dry burning protection, accidental flameout protection, over-temperature protection, water pump anti-clamping protection and so on.

The standard that our country calls a method for: 'gas wall is hanged type quick heating water heater', but it is not the gas water heater on traditional sense however, have essential distinction with water heater. Can be connected to the indoor thermostat, in order to achieve personalized temperature regulation and energy saving purposes. According to statistics, the use of indoor temperature controller can save 20-28% of the gas cost. From July 1, 2011, the new national standard GB25034-2010 for gas heating hot water heater was implemented.

The industry's leading producers are BOSCH, Vaillant and Squirrel, with a revenue ratio of 12.84%, 10.72% and 5.59%, respectively.
