According to our (Global Info Research) latest study, the global Gas Zero-Turn Mowers market size was valued at US\$ 3702 million in 2025 and is forecast to a readjusted size of US\$ 4817 million by 2032 with a CAGR of 3.9% during review period.

A zero-turn riding Zero-Turn Mowers (colloquially, a z-turn) is a standard riding Zero-Turn Mowers with a turning radius that is effectively zero. Different brands and models achieve this in different ways, but hydraulic speed control of each drive wheel is the most common method. Both commercial duty and homeowner models exist, with varying engine power options, size of cutting decks, fuel type (gasoline or diesel), and prices. A z-turn mower typically drives faster and costs more than a similarly sized conventional riding mower that has steerable front wheels. This report focus on gasoline or diesel Zero-Turn Mowers market.

Homeowners of North America and Europe use aesthetic appearance over their house. Due to this, they adopt different styles of houses, such as the ranch style that consists of the garden or the lawn to provide a better view. Hence, this leads to the use of zero turn mowers on periodical basis to maintain the lawn, which boosts the demand for zero turn mowers in North American and European regions. In addition, the use of modern technologies over the zero turn mowers increases productivity while reducing the efforts that lead to greater production of zero turn mowers by different companies.
