Abstracts

The global Gasoline Direct Injection (GDI) System market size is expected to reach \$ 18280 million by 2032, rising at a market growth of 8.7% CAGR during the forecast period (2026-2032).

Gasoline direct injection (GDI), also known as petrol direct injection, direct petrol injection, spark-ignited direct injection (SIDI) and fuel-stratified injection (FSI), is a variant of fuel injection employed in modern two-stroke and four-stroke gasoline engines. The gasoline is highly pressurized, and injected via a common rail fuel line directly into the combustion chamber of each cylinder, as opposed to conventional multipoint fuel injection that injects fuel into the intake tract or cylinder port. Directly injecting fuel into the combustion chamber requires high-pressure injection, whereas low pressure is used injecting into the intake tract or cylinder port.

AGI, AGCO and B?hler Group are the leaders of the Gasoline Direct Injection (GDI) System industry, which take about 50% market share. North America is the major region of the global market, which takes about 35% market share.
