Abstracts

GPFs are used for controlling the emission levels of particulate matter number of direct fuel injected gasoline cars. They are fitted with the exhaust system of the vehicle. The filter's substrate wall traps and collects the particulate matter from the engine exhaust gases before releasing, reducing the particulate emission levels.

SCOPE OF THE REPORT:

This report focuses on the Gasoline Particulate Filters in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The full-size segment of passenger cars dominated the GPF market and will continue its dominance throughout the forecast period.

EMEA is anticipated to occupy the largest portion of the GPF market due to the vehicular emission norms followed in the region. Much of the region's growth is attributable to the exports of cars equipped with GPF from Europe. European countries like Germany, the UK, France, Italy, and Spain are the major revenue contributors to the GPF market for passenger cars in the region.

The worldwide market for Gasoline Particulate Filters is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
