Gastric Cancer Therapy is caused by uncontrolled abnormal cell proliferation that has the ability to spread and invade other sections of the body. Changes in the gene cause a single cell or a few cells to expand and replicate, which is when cancer begins. This could lead to the growth of a tumor, which is an abnormal mass of tissue. The creation of cancer cells in the stomach lining is known as Gastric Cancer Therapy or stomach cancer. Diet and stomach disorders are both risk factors for Gastric Cancer Therapy. Stomach pain, poor appetite, weight loss, indigestions, nausea, vomiting with or without blood are some of the symptoms of Gastric Cancer Therapy.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs.
