According to our (Global Info Research) latest study, the global Gastrointestinal Endoscopic Device market size was valued at USD 3350.4 million in 2023 and is forecast to a readjusted size of USD 4797.7 million by 2030 with a CAGR of 5.3% during review period.

Endoscopy means looking inside and typically refers to looking inside the body for medical reasons using an endoscope, an instrument used to examine the interior of a hollow organ or cavity of the body.

With the procedure known as gastrointestinal endoscopy, a doctor is able to see the inside lining of your digestive tract. This examination is performed using an endoscope—a flexible fiber-optic tube with a tiny TV camera at the end. The camera is connected to either an eyepiece for direct viewing or a video screen that displays the images on a color TV. The endoscope not only allows diagnosis of gastrointestinal (GI) disease but treatment as well.

Olympus was the leading manufacturer in the market of Gastrointestinal Endoscopic Device, and it alone achieved a revenue market share about 67%. Top 5 companies took up a combined share of approximately 97% of the world's total. Market competition is not intense, since key companies hold thier own patent and established customers. Geographically, North America is the largest consumption area, with a share close to 39% in 2018.
