## Abstracts

According to our (Global Info Research) latest study, the global Gastrostomy Feeding Tube (G-tube) market size was valued at US\$ 792 million in 2025 and is forecast to a readjusted size of US\$ 1152 million by 2032 with a CAGR of 5.6% during review period.

A gastrostomy tube (also called a G-tube) is a tube inserted through the belly that brings nutrition directly to the stomach. It's one of the ways doctors can make sure kids who have trouble eating get the fluid and calories they need. A surgeon puts in a G-tube during a short procedure called a gastrostomy. A gastrostomy tube, often called a G-tube, is a surgically placed device.

The Gastrostomy Feeding Tube (G-tube) market is primarily driven by the increasing prevalence of chronic diseases and conditions that impair normal swallowing and digestion. Conditions such as neurological disorders, head and neck cancers, and severe physical disabilities often necessitate the use of G-tubes for long-term nutritional support, especially among the elderly and pediatric patients. Additionally, advancements in minimally invasive gastrostomy procedures have improved patient outcomes, making G-tube placement safer and more accessible, which further drives market growth. With growing awareness about enteral feeding as a viable solution for nutritional support, the demand for G-tubes in both hospital and home care settings is on the rise.

Despite the growing need, the G-tube market faces challenges such as complications associated with long-term use, including infection, tube displacement, and leakage, which require close monitoring and frequent medical attention. The high cost of gastrostomy procedures and equipment, along with limited access in lower-income

regions, restricts market expansion. Additionally, patient discomfort and psychological concerns surrounding G-tube use can lead to reduced acceptance, especially in cases where patients or caregivers are not well-informed or supported by healthcare providers. These factors collectively limit the potential growth and acceptance of G-tubes despite their essential role in nutritional care.

Gastrostomy Feeding Tube (G-tube) is widely used for Children and Adult. In Gastrostomy Feeding Tube (G-tube) market, Adult holds an important share. Children segment is likely to command a substantial portion of the gastrostomy tube feeding devices market through the assessment timeline, on account of the rising number of premature births worldwide. During 2020, about 1 in 10 infants was born premature across the United States, as per the data published by the Centers for Disease Control and Prevention (CDC). In Australia, about 8% of the total babies are born prematurely, or before 37 weeks.

Americas is the largest consumption place, with a consumption market share nearly 36% in 2023. Following Americas, Europe is the second largest consumption place with the consumption market share of 29%.
