Gate-All-Around FET (GAAFET) is a multi-gate device that interpolates more than one gate devices into a single device. GAAFET is silicon nanowire with gate going around it. It is a device, where the gate is placed on all four sides of the channel. These multiple gates are controlled by a single gate electrode.

Scope of the Report:

The major factor that drives the demand of GAAFET technology market is the enhancement of breakdown voltage. Minimized energy losses is also the key driver of the market.

In addition GAAFET also has high efficiency, improved durability, and it supports high input impedance, which in turn fuels the market growth. High fabrication cost majorly restricts the market growth.

However, performance issues such as current leakage and breakdown hamper the market.

The worldwide market for Gate-All-Around FET (GAAFET) Technology is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
