Abstracts

The global Gateway Antivirus Software market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Gateway AntiVirus is a fully integrated, signature-based security subscription that blocks spyware, viruses, trojans, and blended threats in real time. It scans files embedded in network traffic, including files in HTTP traffic (web downloads) and files in email traffic (attachments). If an infected file is detected, a gateway anti-virus system removes it from the traffic, so it does not affect other users. To scan files within network traffic, gateway anti-virus must understand a broad range of file encoding protocols (i.e., MIME, ucode, Base64) and file compression algorithms.
