According to our (Global Info Research) latest study, the global Gauge Lubricant market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Gauge lubricant is a type of lubricant that is specifically designed for use on gauges. Gauges, such as pressure gauges or temperature gauges, often have moving parts or mechanisms that require lubrication to ensure smooth and accurate operation. Gauge lubricant is typically a thin, low-viscosity oil or grease that is applied to these moving parts to reduce friction and wear, and to maintain the proper functioning of the gauge. It helps to prevent sticking, binding, or erratic readings that can occur when the gauge is not properly lubricated. Gauge lubricant is usually applied sparingly and with precision to avoid any interference with the gauge's accuracy.
