GC, or gas chromatography, autosamplers are instruments that automatically take a sample and insert it into the GC for analysis, which is both more time effective and more reliable than doing it by hand. GC autosamplers can be used anywhere GC is used, including forensic, environmental, and medical labs, in the pharmaceutical and food and beverage industries, to analyze a sample for quality control, purity, or to look for a particular analyte. There are three main types of GC autosamplers; liquid, which work with liquid samples, headspace, which work with volatile organic samples, and SPME which uses a fiber to extract the components of your sample. There are GC autosamplers that can do all three types of autosampling.
