Ge optical windows are an infrared window made of germanium material. It is transparent to long-wave infrared radiation and has a high refractive index, making it ideal for use in infrared optics. Germanium infrared windows can transmit light in the wavelength range of 2-16 μm, which is in the far infrared to mid-infrared region. This transparency makes it ideal for use in infrared imaging systems as well as spectroscopy and remote sensing equipment. Germanium infrared windows can be used in harsh environments because it has high thermal conductivity and is highly resistant to thermal or mechanical shock. Overall, germanium infrared windows are a versatile material with excellent optical, thermal, and mechanical properties, making them ideal for a variety of infrared applications.
