The global Gear Box of Rail Vehicle market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The gear box of rail vehicles is a mechanical component that transmits the power of the engine or motor to the wheels to enable the vehicle to move. For example, in a diesel electric locomotive, the diesel engine drives the generator, which generates electricity to provide power for the motor that rotates the wheels. The gearbox is located between the motor and the wheel and is responsible for transmitting torque from the motor to the wheel. The gearbox usually consists of gears, shafts and bearings in the housing. The gears are designed to mesh with each other and transmit power from the input shaft to the output shaft at a specific speed and torque ratio. The transmission also allows the operator to change the speed and direction of the vehicle by shifting gears.
