The global Gear Hob Cutting Tools market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Gear hob is a kind of tool for machining straight and helical cylindrical gears according to the principle of helical gear meshing. According to the meshing principle of helical gear pair, the gear is cut by the generative method. During processing, the hob is equivalent to a helical gear with a large helix angle. The number of teeth is the number of heads of the hob. The workpiece is equivalent to another helical gear, which meshes with each other according to a pair of helical gears and rotates at a fixed speed ratio. , The tooth profile of each adjacent position which is cut successively is enveloped into the tooth profile of the gear.
