## Abstracts

The global Gear Pump Controller market size is expected to reach \$ 763.1 million by 2029, rising at a market growth of 6.4% CAGR during the forecast period (2023-2029).

Gear Pump Controller is a device used to control gear pumps. It can control the gear pump's operating speed, flow, pressure and other parameters to meet the fluid delivery requirements under different working conditions. Gear pump controllers can be divided into two types: manual control and automatic control. Manual control requires adjustment by the operator, while automatic control can automatically adjust the operating state of the pump according to preset parameters. Gear pump controllers are widely used in industrial automation, agricultural irrigation, construction, medicine and other fields. They have the characteristics of high adjustment accuracy, fast response speed, stability and reliability.
