A gear reducer is a mechanical device that reduces input speed and increases output torque through a series of gear combinations. It converts high-speed rotating input power into low-speed, high-torque output to meet the working requirements of different mechanical equipment. Gear reducers are widely used in various industrial equipment and machinery, such as automated production lines, conveying systems, robotics, and various types of transportation, playing a key role in transmitting power, adjusting speed, and improving mechanical efficiency. Depending on different application scenarios and technical requirements, gear reducers come in a variety of forms, including cylindrical gear reducers, worm gear reducers, and planetary gear reducers.
