Gearboxes for Metal Rolling Equipment are heavy-duty transmission components used in steel and non-ferrous metal rolling equipment. They are typically composed of gear pairs, shafts, bearings, housings, lubrication systems and cooling systems. Their main function is to transmit motor power steadily to rolls, pinion stands, coilers, uncoilers, levelers and other mechanisms, enabling speed reduction, torque increase, power distribution and stable operation during the rolling process. These products require high load-bearing capacity, high transmission accuracy, strong impact resistance, fatigue resistance, high-temperature resistance and the ability to operate continuously over long periods.

The upstream supply chain of Gearboxes for Metal Rolling Equipment mainly includes gear steel, alloy steel forgings, cast steel parts, bearings, seals, lubricants, cooling systems and machined components. The midstream segment covers gear design, heat treatment, precision machining, assembly, testing and complete unit supply. Downstream applications mainly include steel rolling, non-ferrous metal rolling and other rolling-related fields. Product value is mainly concentrated in gear design and

manufacturing, heat treatment quality, transmission accuracy control, reliability validation and adaptability to heavy-duty rolling conditions.
