According to our (Global Info Research) latest study, the global Gearless Tractors market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The gearless tractor cancels the gear reducer, connects the tractor motor to the tractor wheel directly, and installs the tractor with the brake in the middle position.

A gearless tractor is a type of tractor with a drive wheel directly connected to a motor. It is called gearless because it does not use a gearbox. The gearless tractor directly USES the electric motor to drive the car, eliminating the gearbox. It makes the tractor more efficient and the elevator run better. With the progress of technology, permanent magnet technology is becoming more and more perfect. In recent years, permanent magnet synchronous traction machine has stepped into the elevator step by step.
