## Abstracts

According to our (Global Info Research) latest study, the global Gel Ion Exchange Resin market size was valued at US\$ 1420 million in 2025 and is forecast to a readjusted size of US\$ 1886 million by 2032 with a CAGR of 4.2% during review period.

Gel-type ion exchange resins constitute a class of spherical polymeric resins featuring a backbone composed of styrene-divinylbenzene or acrylic cross-linked polymers, which facilitate ion exchange through functional groups such as sulfonic acid, carboxylic acid, quaternary ammonium, and tertiary amine groups. Their defining characteristic is an internal structure consisting of a homogeneous gel; unlike macroporous resins, they do not possess stable, permanent macropores. Instead, once the resin absorbs water and swells, ion migration and exchange are accomplished through micropores and diffusion channels formed between the cross-linked polymer chains.

The upstream segment of the gel-type ion exchange resin industry primarily involves basic chemical raw materials, including styrene, divinylbenzene, acrylates, acrylonitrile, chloromethyl ethers (or chloromethylation reagents), sulfuric acid, liquid caustic soda, hydrochloric acid, trimethylamine, solvents, dispersants, cross-linking agents, and polymerization auxiliaries. The midstream segment comprises resin manufacturing enterprises, where core barriers to entry lie in the precise control of polymerization particle size, the design of cross-linking degrees, and the effective introduction of functional groups. The downstream segment primarily serves fields such as industrial water treatment, ultrapure water preparation, desalination and decolorization in the food and beverage industry, and purification processes in the pharmaceutical and biopharmaceutical sectors.

In 2025, the global sales volume of gel-type ion exchange resins is projected to reach approximately 1.2 million tons, with a global average market price of approximately \$1,150 per ton; the gross profit margins for major enterprises within the industry are expected to range between 20% and 35%.
