Abstracts

The global Gelatin for Capsules market size is expected to reach \$ 2200 million by 2032, rising at a market growth of 5.4% CAGR during the forecast period (2026-2032). In 2025, global Gelatin for Capsules production reached approximately 187 k tons, with an average global market price of around US\$7,952 per ton. Gelatin is a protein made from animal collagen, usually from cows and pigs. It's commonly used to make capsules, cosmetics, ointments, and foods. Gelatin is widely used to create the shell for both hard and soft capsules, providing an effective means of protecting the contents from light, atmospheric oxygen, contamination and microbial growth as well as masking taste and odor.

The global market for gelatin used in capsules is characterized by maturity and steady growth, primarily driven by demand from the pharmaceutical and nutraceutical industries. Gelatin capsules currently hold a dominant position in the capsule market due to their advantages in compatibility, stability, and masking unpleasant tastes. Key growth drivers include the rising demand for chronic disease medications fueled by an aging global population, increased health consciousness boosting nutraceutical consumption, and the expansion of pharmaceutical manufacturing capabilities in emerging markets. However, the market faces constraints such as price volatility of raw materials like gelatin, and structural challenges stemming from cultural practices, religious beliefs (e.g., halal, vegetarian requirements), and some consumer concerns over animal-derived ingredients. Market trends are shifting towards diversification and innovation. On one hand, non-animal capsules (e.g., Hydroxypropyl methylcellulose - HPMC) are gaining wider acceptance to meet specific dietary and ethical preferences, with their growth rate anticipated to outpace that of traditional gelatin capsules. On the other hand, the market is moving towards functionalization and customization, with technologies like enteric-coated or sustained-release capsules attracting attention for specialized drug delivery needs. Concurrently, advancements in manufacturing

technologies, such as the development of liquid-filled hard capsule processes, are continuously expanding the application scope of gelatin capsules. Future opportunities are evident. The Asia-Pacific region, particularly China and India, is poised to be the fastest-growing market globally, driven by robust pharmaceutical and nutraceutical industries, increasing healthcare expenditure, and large population bases. Furthermore, the growth of e-commerce provides new channels for nutraceutical sales, indirectly stimulating capsule demand. Industry consolidation, strategic collaborations, and ongoing R&D focused on high-end pharmaceutical applications will also create new avenues for growth for market participants.
