Abstracts

The global Gelatin Substitutes market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Gelatin substitutes as ingredients are increasingly used in food items such as marshmallows, jellies, jams, cakes, custard, glazes, gummy bears, fruit syrups, flan, icing, and baking dough. One of the most widely used gelatin substitutes, powder agar, has more applications in the commercial food industry while strip agar has traditionally been used only in domestic cooking. Therefore, the rising incorporation of the product in food & beverage applications is expected to positively impact the industry's growth. Increasing product penetration in the pharmaceutical sector is anticipated to be a major growth driver of the overall market growth. The rising prevalence of noncommunicable diseases, the growing aging population, and chronic disorders are expected to fuel the growth of the pharmaceutical sector, resulting in increased product consumption in the application thereby promoting market growth during the estimated timeframe.

Gelatin is an animal by-product sourced from animal hooves, bones, cartilages, and other parts of abattoir meat leftovers. As such, it's not appropriate for anyone whose diet excludes animal derived products or products from animals killed for consumption. It is possible to find plant based substitutes that can mimic gelatin in a variety of dishes.
