Abstracts

Gem and jewelry microscopes are more advanced than ordinary microscopes as they have a darkfield condenser on the bottom light source and an iris. They also have a set of jewel clamps or tweezers that are built to hold the stone in place, and help determine the interior condition and outlook of the stone's surface. Gems and jewels have various quality levels or grades that ultimately influence their market value and cost. This is why a professional diamond or quality gem microscope is essential for jewelers.
