The global Gene-based Therapy Medicinal market size is expected to reach \$ 44180 million by 2029, rising at a market growth of 24.9% CAGR during the forecast period (2023-2029).

The gene-based therapy medicinal market is driven by the potential for revolutionary treatments by targeting genetic disorders at their source. These therapies offer hope for conditions with no existing cures. However, a significant challenge is the complexity of gene-based therapies and the need for rigorous clinical trials to prove safety and efficacy. Regulatory approvals and high development costs pose challenges for manufacturers. Additionally, market competition and pricing concerns necessitate a balance between accessibility and recovering research and development investments. The gene-based therapy market holds promise but faces hurdles in delivering groundbreaking treatments while addressing scientific, regulatory, and economic challenges.

Gene Delivery System or Gene therapy is an experimental technique that uses genes to treat or prevent disease. In the future, this technique may allow doctors to treat a disorder by inserting a gene into a patient's cells instead of using drugs or surgery.
